# Our Story

YES **STEEL**  
YES **STRUCTURE**  
ROOFS **SOLUTION**

Since 1999, YES YES ROOFS has emerged as a leading provider of building solutions, specializing in roofing services and innovative steel buildings. With over two decades of experience, we are dedicated to delivering superior prefabricated structures, reducing project timelines and costs.

Our commitment to excellence and innovation in structural engineering has allowed us to continuously set industry standards, providing reliable and long-lasting solutions that meet the unique needs of our clients with minimal maintenance. We take pride in our expertise and our ability to exceed expectations on every project.

At Yes Yes Roofs, our dedicated team is committed to excellence, ensuring that every project whether large or small meets the highest standards of safety, functionality, and aesthetic appeal. From traditional roofing systems to modern steel structures, we pride ourselves on offering sustainable and innovative building solutions that stand the test of time.

# Pre Engineered Buildings

Pre-Engineered Buildings (PEBs) are modern steel structures designed and manufactured off-site, then assembled quickly at the construction location.

This method drastically reduces construction time while ensuring consistent quality, cost efficiency, and minimal material wastage. Every component—from frames and panels to bolts—is precision-engineered for optimal performance, making PEBs the smarter alternative to traditional building methods.

# Why Choose Pre-Engineered Buildings?

Fast. Cost-Effective. Built to Last.

Pre-Engineered Buildings (PEBs) are quickly becoming the go-to solution across industries—and for good reason.

## Faster Construction

PEBs can reduce construction time by up to 50% compared to conventional buildings, thanks to factory-controlled fabrication and quick on-site assembly.

## Cost Savings

Optimized design and reduced labor lead to significant savings on total project costs—without compromising on quality or durability.

## Customizable

Whether it's a warehouse, retail space, or cold storage, PEBs are designed to meet your unique space, function, and aesthetic needs.

## Less Maintenance

PEBs use high-grade, corrosion-resistant steel that demands less upkeep over time—saving you both time and resources.

## Eco-Friendly Construction

Minimal on-site work means less pollution, and over 90% of structural steel is recyclable—making PEBs a greener alternative.

## Why Us

### In-house Capabilities

Our in-house team of architects and engineers is passionate about design innovation. We blend form and function to create steel structures that not only meet your practical needs but also add aesthetic value

### Our Factory

We invest in cutting-edge technology and stay updated with the latest industry trends to ensure that our clients benefit from the most advanced steel building solutions available

### Quality First Approach

Quality is at the heart of everything we do. We adhere to quality control measures at every stage of the construction process to ensure that your steel structure is built to last

### In-house Capabilities

We're your single-source solution for all your steel building needs. From design to construction, we build excellence into every project
